INNOVATIONS
IN GRAPH THEORY

EDITORIAL

————

We are proud to introduce the journal, *Innovations in Graph Theory*, devoted to publishing high-quality research in graph theory including its interactions with other areas. This is diamond open access —meaning no fees are charged to authors and readers— and community-owned —via a non-profit society, *Stichting Innovations in Graph Theory.* Fresh on the heels of several similar launches and rebirths (*Advances in Combinatorics*, *Algebraic Combinatorics*, *Combinatorial Theory*), we announced the journal at the end of August 2023 in Prague. The broader aim is to enable combinatorial researchers to establish or maintain their scientific careers by exclusively publishing diamond open access.

In the first 12 months, we received 51 submissions. We recognise the professional risk one takes in submitting one's painstaking work to a newly-launched journal with zero track record, and sincerely thank all contributors for their vital support. We offer our wholehearted gratitude to the referees who volunteer their time and expertise. The success of the journal crucially relies on these contributions.

Preliminary discussions on *Innovations in Graph Theory* began a few years ago. The journal would not have gotten off the ground without support from the Dutch Science Council (grant reference OCENW.M20.009) during the startup period. The anonymous referees of that grant proposal wrote enthusiastic encouragement, for which we offer our thanks. We are grateful to the open access publishing platform, *Centre Mersenne* —coordinated through a cooperation of the French National Centre for Scientific Research (CNRS) and Université Grenoble Alpes— for welcoming our journal to the fold, and look forward to a long and fruitful collaboration.

We warmly invite you to peruse our first issue.
